2.7.	Surgeries could be changed into "Joint replacement" surgeries.....	4
2.8.	Enddate not shown in Edit/Print screen for IA injections.....	4
2.9.	Overview screen didn't change when switching between DAS models.....	4
2.10.	Drug End date couldn't be emptied.....	4

1. Major changes

1.1. Not clearly visible when DAS is locked

It was not clearly visible when the DAS model was locked. Functionality has been changed as followed: showing the DAS mannequins slightly grey when the DAS is locked.

1.2. When a visit gets created in the past the visit is active.

When a new visit was created in the past, the visit was locked. Functionality has been changed as followed: when a new visit is created in the past the visit is active.

1.3. Changes in date usage.

From now on only the date formats yyyy-mm-dd and yyyymmdd can be used. When a different format is used an error will popup.

1.4. Not clearly visible when Patient screen is locked

When the Patient characteristics screen is locked all fields are now shown grey.

1.5. Added textual export screen

A new textual export screen has been added to the METEOR application. By pressing the button "Export" in the DAS screen a new screen opens with all DAS and HAQ information in textual form. This screen can be opened by clicking the button "Export" on the right hand bottom of the DAS screen. Text is automatically selected, for copying the text press "CTRL-C", "CTRL-V".

1.6. Hard to click away error messages

Error messages could only be closed when clicking next to the error. Functionality has been changed that when clicking on an error message, the message disappears.

1.7. Start values were shown when deactivating all joints

If all selected joints were deselected in the DAS screen the SwollenCount and/or RAI were displayed with the start value instead of the value 0. Functionality has been changed when all joints are deselected the SwollenCount and/or RAI is displayed as 0.

2. Minor changes

2.1. Add drug window opens too low on the screen

The screen for adding drugs opened too low on the screen. Functionality has been changed as followed: the add drug screen should always open in the middle of the screen. This also applies for the Surgery and IA injection module.

2.2. Button "Visit" should be shown grey when a new patient is created

When a patient was created but not yet saved, the button "Visit" was shown active. Functionality has been changed as followed: when the user selects the button "New

patient” from the “Search patient” screen, the “Patient characteristics” screen is opened and only the buttons “Patient characteristics” and “Close” are shown active. All other buttons are shown grey.

2.3. When a patient is saved, buttons DAS and HAQ, should be shown inactive.

When a new patient was saved all buttons except “New visit”, “Patient characteristics” and “Close” were active. Functionality has been changed as followed: when a new patient is saved all buttons except “DAS” and “HAQ” are active.

2.4. IA injections were not downloaded when using the download functionality

IA injections are added to the download functionality.

2.5. No error message when creating an existing visit

When a user tried to create an existing visit no warning was shown and the add screen closed. From now on an error message will pop up showing that the visit already exists.

2.6. It was possible to change “Joint replacement” surgeries

It was possible to change “Joint replacement” surgeries into different surgeries. Functionality has been changed as followed: “Joint replacement” surgeries can no longer be changed into different surgeries.

2.7. Surgeries could be changed into “Joint replacement” surgeries

It was possible to change regular surgeries into “Joint replacement” surgeries. Functionality has been changed as followed: regular surgeries can no longer be changed into “joint replacement” surgeries.

2.8. Enddate not shown in Edit/Print screen for IA injections

The End date was not shown in the Edit/Print doctors screen for IA injections. Functionality has been changed as followed: the End date is shown for IA injections.

2.9. Overview screen didn’t change when switching between DAS models

When changing between from a DAS28 model to a DAS53 model, the RAI and SwollenCount were not displayed in the overview. Functionality changed as followed the RAI and SwollenCount are displayed when switching to a DAS53 model.

2.10. Drug End date couldn’t be emptied

When a drug End date was entered this field couldn’t be emptied. Functionality has changed as followed: the field can be emptied.
